

ZLDR Event Reporter

User Guide

Version 1.10.0 · June 2026

Overview

ZLDR Event Reporter is an Android app for members of **Zwift Long Distance Runners and Riders (ZLDR)**. It automatically syncs with the Zwift platform to collect attendance statistics for every ZLDR running and cycling event — how many riders registered, showed up, and finished.

The app is useful for two audiences:

- **Leaders** — review upcoming events, check your series at a glance, and see who finished alongside you.
- **Administrators** — track attendance trends across recurring series, monitor live events as they happen, and generate shareable reports for the community.

Data source: All figures come directly from Zwift via its event API. The app does not maintain its own attendance records independently — it stores and displays whatever Zwift reports.

Getting Started

On first launch you are prompted to sign in with your **Zwift credentials** (email and password). The app uses your account only to retrieve event data; credentials are stored securely on your device using Android's encrypted storage and are never transmitted to any server other than Zwift.

After signing in the app performs its first sync automatically. This discovers all upcoming ZLDR events and fetches attendance counts for recent past events. The process typically completes within a few seconds on a good connection.

Auto-sync: The app re-syncs every time it comes to the foreground (e.g. when you switch back to it) and also runs a background sync roughly every four hours, so data stays current without any manual action.

Reports Screen — Date View

The Reports screen is the main screen of the app. It opens in **Date view** by default, grouping events by the selected time period. Two rows of filter buttons appear at the top:

- **Period** — Day, Week (default), Month, or Year
- **Sport** — All, Running, or Cycling

Events are organised into two collapsible top-level sections:

- **Upcoming Events** — collapsed by default; shows future events with their current registered count.
- **Completed Events** — expanded by default; shows past events grouped into period rows. The current period row auto-expands on launch.

Tap any period row header (e.g. *Week of Jun 7*) to expand or collapse it. Each event row shows the event name and sport icon on the first line, and date + stat columns on the second line.

Stat columns

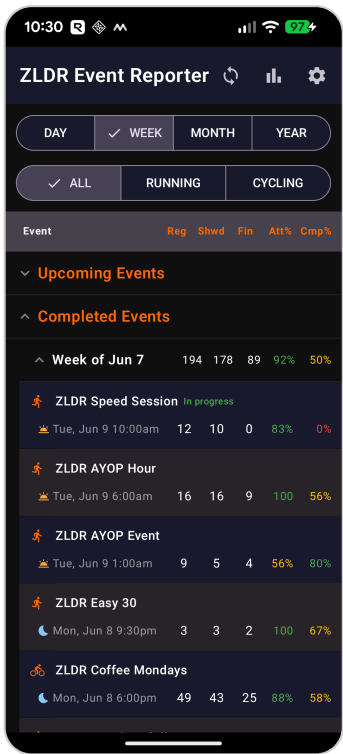

Fig. 1 Reports screen, Date view
(Week filter selected)

Column	Full name	What it means
Reg	Registered	Riders who signed up before the event
Shwd	Showed Up	Riders who joined the event in-game
Fin	Finished	Riders who completed and appear in Zwift's results
Att%	Attendance rate	Shwd ÷ Reg — green ≥70%, amber ≥40%, red <40%
Cmp%	Completion rate	Fin ÷ Shwd — same colour scale

Tap any column header label in the header bar to see its full definition in a popup.

In Progress: Events currently underway display a blinking green *In progress* badge. The app polls Zwift every 60 seconds while an event is live and updates the Reg count in real time.

Reports Screen — Series View

Tap the **bar-chart icon** in the top bar to switch to **Series view**. This groups all events by their recurring series name and day of the week — for example, *ZLDR AYOP Hour (Tuesday)* — making it easy to see participation trends across multiple occurrences of the same event.

Each series row has a **two-line header**. The first line shows the series name with an expand/collapse chevron. The second line shows the number of occurrences alongside **aggregate totals** across all of them (Reg, Shwd, Fin, Att%, Cmp%). Rows start **collapsed by default** — tap the header to reveal individual occurrence rows (most recent first), and tap again to collapse. If a series contains a live **In Progress** event, that row auto-expands when you first open Series view.

As with Date view, the screen is split into **Upcoming Events** (collapsed, nearest first) and **Completed Events** (expanded, most recent first).

Tap the icon again to return to Date view.

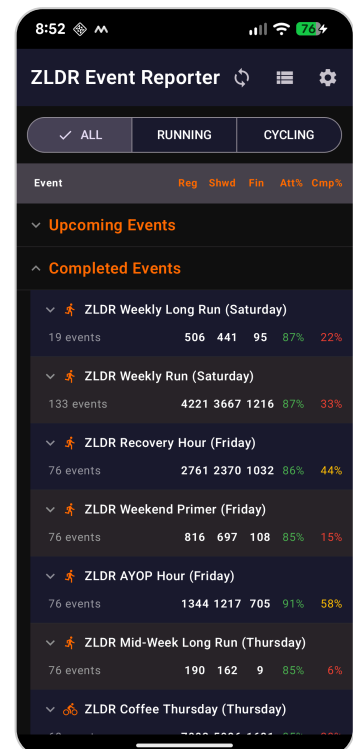

Fig. 2 Reports screen, Series view

Gestures on Event Rows

Three gestures are available on any event row in both Date and Series views:

Tap

Opens **Event Details** — name, date, duration, description, and category breakdown with rider counts per subgroup.

Double-tap

Opens the **Participant List** for completed events — finishing rank, rider name, late-join flag, time, and distance. Not available for upcoming events.

Long press

Opens the event's page on **zwift.com** in your browser, or in the Zwift Companion app if it is installed on the same device.

Event Details Screen

Tap **once** on any event row to open the Event Details screen. It shows:

- Event name and sport icon
- Status — *Completed* with date and local time, or *Starts* for upcoming events
- Duration
- About — the event description as entered in Zwift
- Categories — each subgroup (e.g. category E) listed with its rider count

For completed events where all three counts (Reg / Shwd / Fin) are zero, a **Re-fetch** banner appears at the top. Tapping **Re-fetch** resets the event so the next sync attempts to retrieve the data from Zwift again. This can happen if the sync ran before Zwift had finished recording the results.

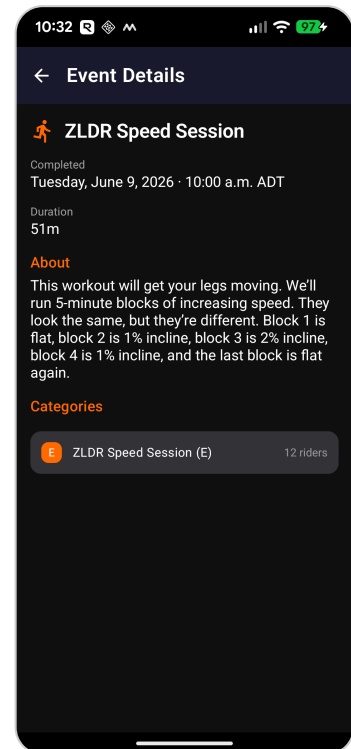

Fig. 3 Event Details screen

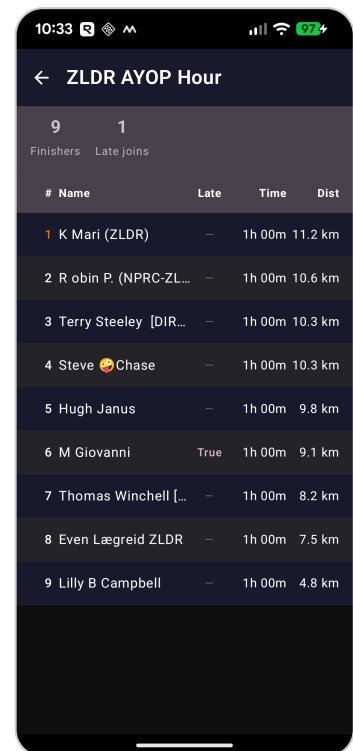

Participant List

Double-tap any completed event row to open the Participant List. Each row shows:

- **#** — finishing rank
- **Name** — rider's Zwift display name
- **Late** — *True* if the rider joined after the event started
- **Time** — total time in the event
- **Dist** — distance covered

Summary counts at the top show total **Finishers** and **Late Joins**. Loading the participant list also updates the Fin count stored for that event, so the Reports screen stays accurate.

If Zwift has not yet posted results, the screen shows *Results not yet available for this event*. Check back a few minutes after the event ends and sync again.

#	Name	Late	Time	Dist
1	K Mari (ZLDR)	—	1h 00m	11.2 km
2	R obin P. (NPRC-ZL...	—	1h 00m	10.6 km
3	Terry Steeley [DIR...	—	1h 00m	10.3 km
4	Steve 🐞 Chase	—	1h 00m	10.3 km
5	Hugh Janus	—	1h 00m	9.8 km
6	M Giovanni	True	1h 00m	9.1 km
7	Thomas Winchell [...	—	1h 00m	8.2 km
8	Even Lægreid ZLDR	—	1h 00m	7.5 km
9	Lilly B Campbell	—	1h 00m	4.8 km

Settings

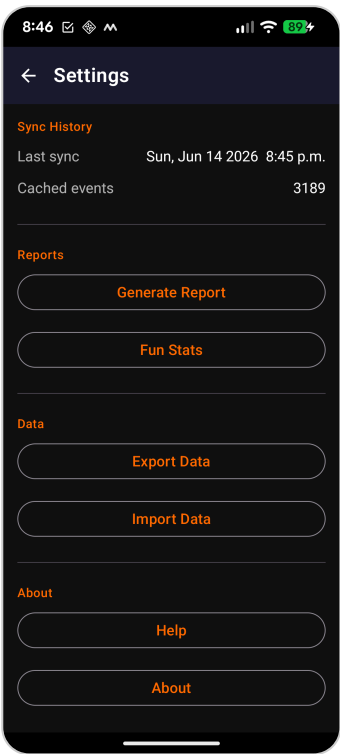

Fig. 5 Settings (top)

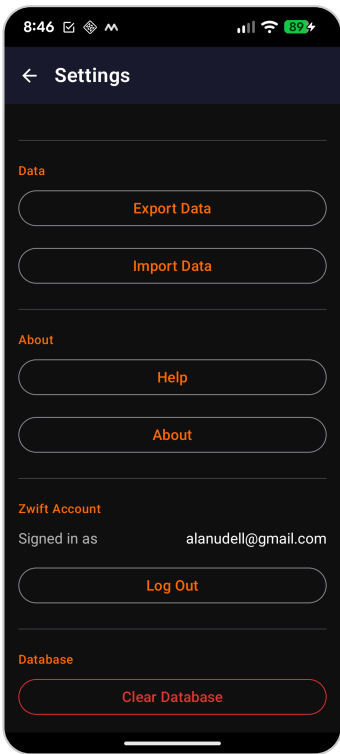

Fig. 6 Settings (bottom)

Tap the **gear icon** in the top-right corner of the Reports screen to open Settings.

Sync History

Shows the date and time of the last successful sync, and the total number of events currently stored on your device.

Generate Report

Opens the Report Generator dialog — see the next section for full details.

Fun Stats

Tap **Fun Stats** to open a dialog showing lighthearted highlights drawn from your event history. Stats are split into two sections — **Running** first, then **Cycling** — each covering the past 7 days and the most recent year with enough data.

Past 7 days

Award	What it finds
Biggest Crowd	The event with the highest number of riders who showed up
Star of the Week	The event with the best showed-up-to-registered ratio (minimum 3 registrations)
Ghost Award	The event with the most no-shows (registrations minus showed up)

Ironclad Award

The event with the highest finisher rate (minimum 3 showed up)

If there are fewer than 2 completed events in the past 7 days for a sport, that section shows *"Not enough data this week."*

Series of the Year

Identifies the recurring series with the best average attendance rate (Att%) in the most recent year that has at least 3 occurrences of a series. Shown below the weekly awards for each sport.

Tap **Text** to share a plain-text version, or **PDF** for a formatted document. Both open the Android share sheet.

Export Data

Saves all event records to a JSON backup file and opens the Android share sheet so you can send it to cloud storage, email, or another app. Useful before switching phones or as a periodic backup.

Import Data

Opens a file picker to load a previously exported backup. Records from the file are merged into the local database. If the same event exists in both the backup and on the device, **the backup version wins** — so import an older backup with care.

Help / About

Help opens a quick-reference guide to all major app features. **About** shows the current version number and build date.

Log Out

Signs you out of your Zwift account. Cached event data is **not** deleted — only the stored credentials are removed. You will need to sign in again before the next sync.

Clear Database

Permanently deletes all cached events and resets the sync history. Use this only if you need to start completely fresh. **This cannot be undone** — use Export Data first to preserve your history.

Generating Reports

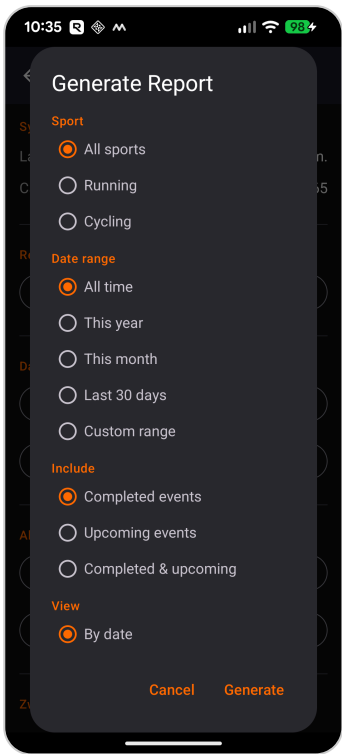

Fig. 7 Report options
(Sport, Date range, Include, View)

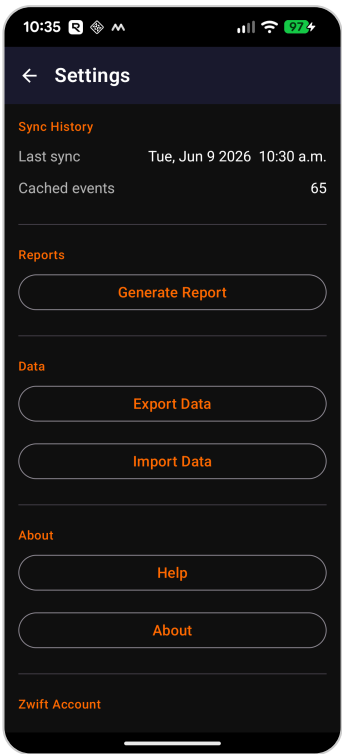

Fig. 8 Report options
(View and Format)

Tap **Generate Report** in Settings to open the report options dialog. Configure each option, then tap **Generate**.

Option	Choices	Notes
Sport	All sports · Running · Cycling	Filters which events are included
Date range	All time · This year · This month · Last 30 days · Custom	Custom opens a date picker for start and end dates
Include	Completed · Upcoming · Both	Upcoming rows show Reg only; Shwd/Fin/Att%/Cmp% are blank
View	By date · By series	By series groups recurring events together with aggregate totals
Format	CSV · Plain text · HTML · PDF	See below

Report formats

- **CSV** — comma-separated file suitable for import into Excel, Google Sheets, or any spreadsheet app.
- **Plain text** — simple fixed-width text report, easy to paste into a message or email.

- **HTML** — formatted report that opens in a browser. Use your browser's *Print* function to save it as a PDF.
- **PDF** — paginated A4 table rendered directly on the device, ready to share or print without a browser.

After generation, the Android share sheet opens so you can save the file, attach it to an email, post it to a messaging app, or open it directly.

Tip for organizers: *By series · All time · HTML* produces a one-page summary of every recurring ZLDR series with aggregate totals and rates — ideal for community newsletters or committee reports.

Tips for Organizers

- **Track series health with Att% and Cmp%.** A sustained Att% below 70% on a recurring series may indicate a scheduling conflict, promotion gap, or time-zone mismatch for your regular riders.
- **Use Series view for trend spotting.** The aggregated row shows overall performance at a glance; expand the row to see whether a recent drop is a single outlier or a longer trend.
- **Results take a few minutes to post.** The Fin count is sourced from Zwift's race-results endpoint, which is typically populated 5–15 minutes after an event ends. If Fin shows 0 right after an event, wait a few minutes and bring the app to the foreground to trigger a sync.
- **Some events show reduced counts after 24 hours.** Zwift removes detailed attendance data for certain private events roughly 24 hours post-event. The app preserves the best value it observed — use the Participant List screen (double-tap) within that window to capture the full finisher list.
- **Back up before switching devices.** Use *Export Data* to save a JSON backup, then *Import Data* on the new device. Your full history will be available immediately without waiting for a re-sync.
- **Generate a PDF report for committee meetings.** Settings → Generate Report → By series · All time · PDF produces a clean paginated table suitable for sharing or printing.
